May 2012

# Overview

1. Who are we?
2. Why we need LiveANDES?
3. LiveANDES description
4. Mobile/Web application
5. Work done and current progress
6. Study case
7. Next Steps / Challenges

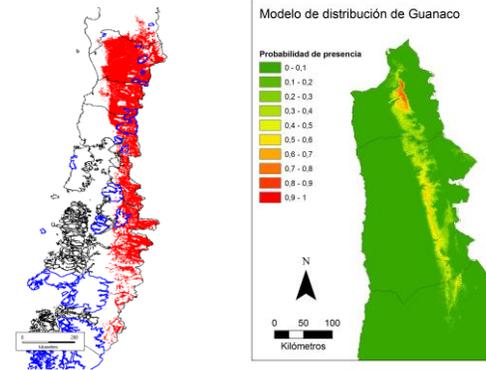

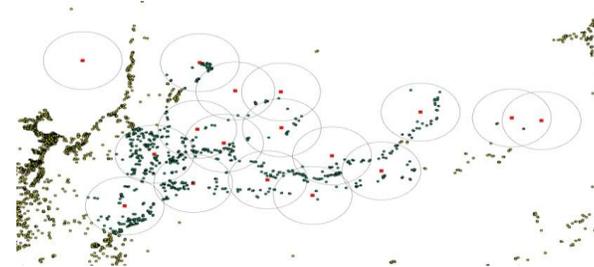

# Fauna Australis Research Lab

Our aim is to study wildlife species to suggest conservation actions

We use all sort of techniques in the field and monitoring wildlife need new technologies and ICT

# Live ANDES (Advanced Network for Distributions of Endangered Species)

Observing endangered species is not always possible:

**One single sighting may provide key information**

Scientists access to more data for analyses and can share results with policy makers

Citizens learn about wildlife and gather data for research and management

Officials and policy makers can manage their data, share it among them and have feedbacks with the scientific community & citizens

# Live ANDES (Advanced Network for Distributions of Endangered Species)

The aim of Live ANDES is to develop a software platform to :

- Detecting, uploading and sharing photos from endangered species into LiveANDES is an innovative way to contribute to biodiversity conservation by promoting citizen science.

Upload/Visualize/Share  
Wildlife data

GLOBAL  
CONSERVATION  
COMMUNITY

- The value of data sharing for wildlife locations mainly refers to the need of mapping the presence and distribution of endangered species to assess their conservation status according to international standards (IUCN Red list).

# We have managed...

- Multi-language web platform to upload, share and visualize data from more than 820 living species of chilean terrestrial wildlife (by common name, english and scientific name)
- Search, visualize and download records from database
- Mobile/Web application
- Extensive data uploading from remote areas during fieldwork

# Live ANDES (Advanced Network for Distributions of Endangered Species)

## Mobile Application

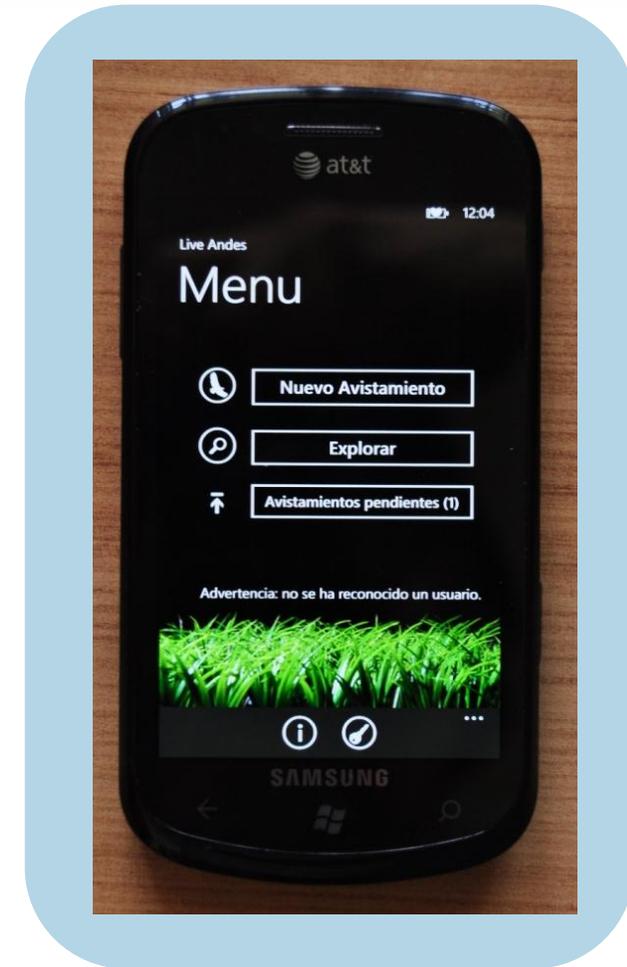

Mobile application to explore/upload data from the camera, gallery and GPS

Online/Offline mode

Images of species and locations can be uploaded using the camera and GPS

The closest sightings can be explored by GPS locations

Our application is developed using C# Visual Studio 2010

**UPLOAD – EXPLORE SIGHTINGS**

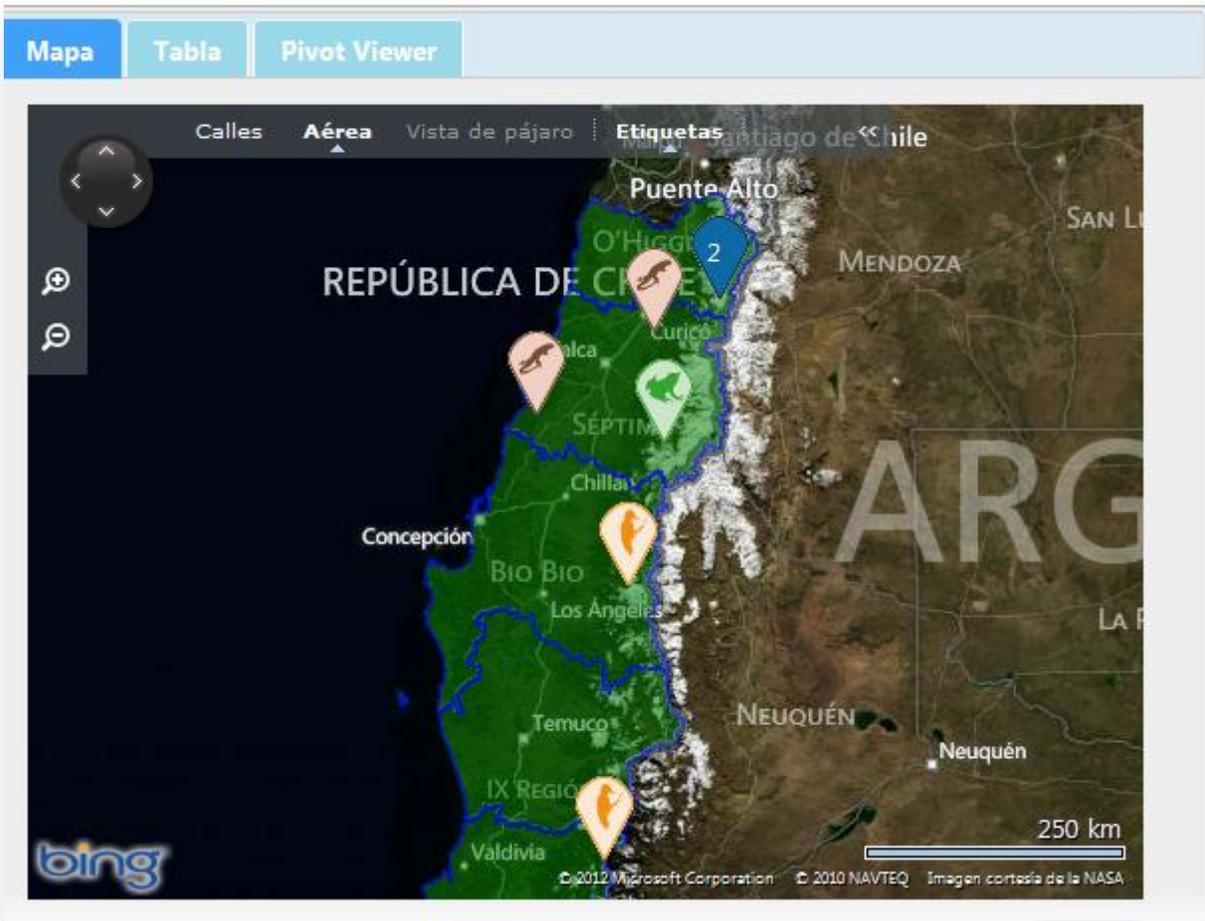

# Live ANDES (Advanced Network for Distributions of Endangered Species)

## Testing in the field

January/February 2012

# Live ANDES (Advanced Network for Distributions of Endangered Species)

# Work done and current progress

## Semester II, 2011

- July 18-20. Microsoft Research Faculty Summit 2011, Redmond, Washington, United States.
- Software design development.
- Mobile application design development.
- Meetings with governmental institutions.
- Two new LACCIR proposals.

# Technical Specifications

The web solution of the platform is based on Microsoft .NET technologies and it includes features such as ...

- ASP.NET MVC
- Bing Map Services
- Silverlight Pivot Viewer
- WCF Services
- SQL Server 2008
- Entity Framework
- LINQ

# Live ANDES: Future Direction ...

## Mobile Cloud Shared Space (MCSS)

# Study Case: Huemul (Hippocamelus bisulcus)

## Sightings

List of sightings

Upload a list of sightings  
File format: use a file downloadable xls here: [Template LatLong / UTM template](#)  
[LatLong Template / UTM Template](#)

Important: Use datum WGS84

The filename to upload must be in the format: xls. For this, once you finish filling the form in excel, you must click in 'Save as' and the 'Type' field select 'Book of Excel 97-2003'.

Name of the file:  
 No se ha seleccionado ningun archivo

Desire that my sightings are deprived

## Avistamientos

Explorar Avistamientos

# Challenges

Currently, Live Andes is available with all terrestrial vertebrates of Chile and a searchable database by ecological, administrative and protected areas can be displayed for the whole country.

Future steps includes to add Bolivian and North American libraries and regions for data sharing and mapping.

# Future Steps

- Partnership with Chilean Ministry of Environment
- National portals in other Latin America countries and a network with conservation programs
- Institutional portals: group statistics, data sharing controls, access to additional data
- Testing mobile application and testing loading data in partner countries.
- Citizen science: Wildlife conservation conferences, workshops in partners countries.

# Citizen Science

# Live ANDES Team

## Principal investigator

Dr. Cristian Bonacic

## Co-investigators

Rurik List (Mexico)

Luis Pacheco (Bolivia)

Andrés Neyem (Chile)

Renzo Angles (Chile)

## Project Coordinator

Catalina Zumaeta

## Software Development Coach

Ignacio Bastías

## Current Developers

Andrea Vásquez
