Our research goal:

Algorithms for data driven usability and expertise assessment!

*Institute of Medicine Report

Eye Tracking Glasses

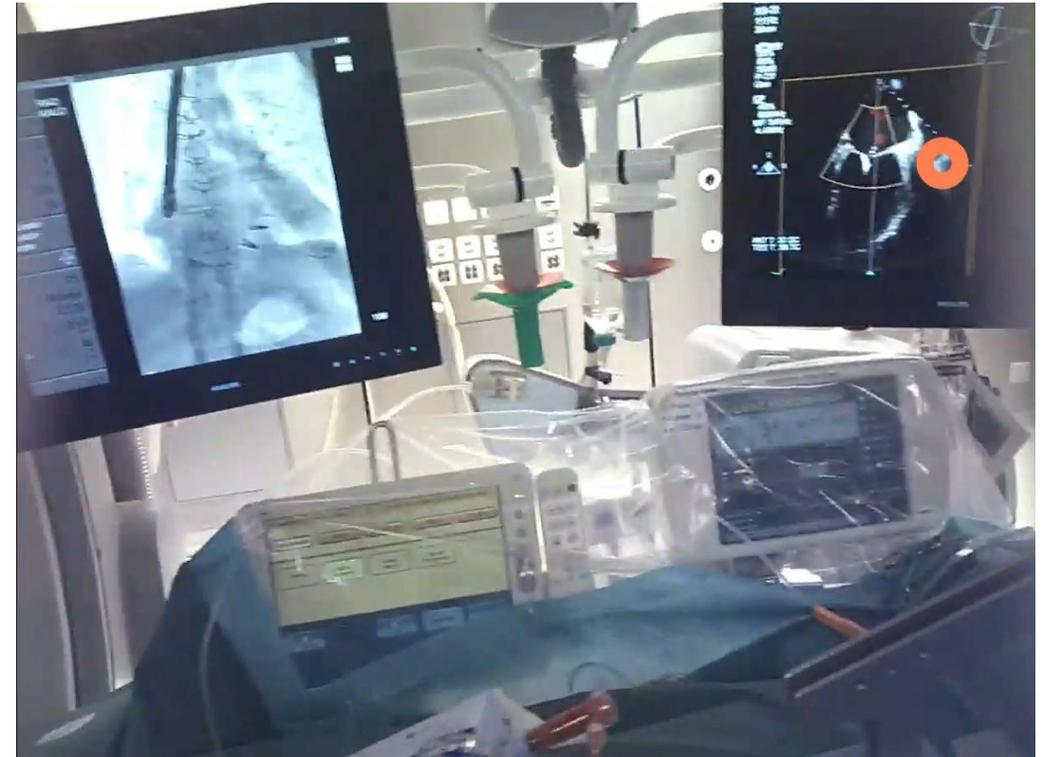

Scene Camera
Resolution
1280x960px @24 fps

Gaze Tracking
Sampling Rate: 60Hz
Accuracy: 0.5°

Integrated Microphone

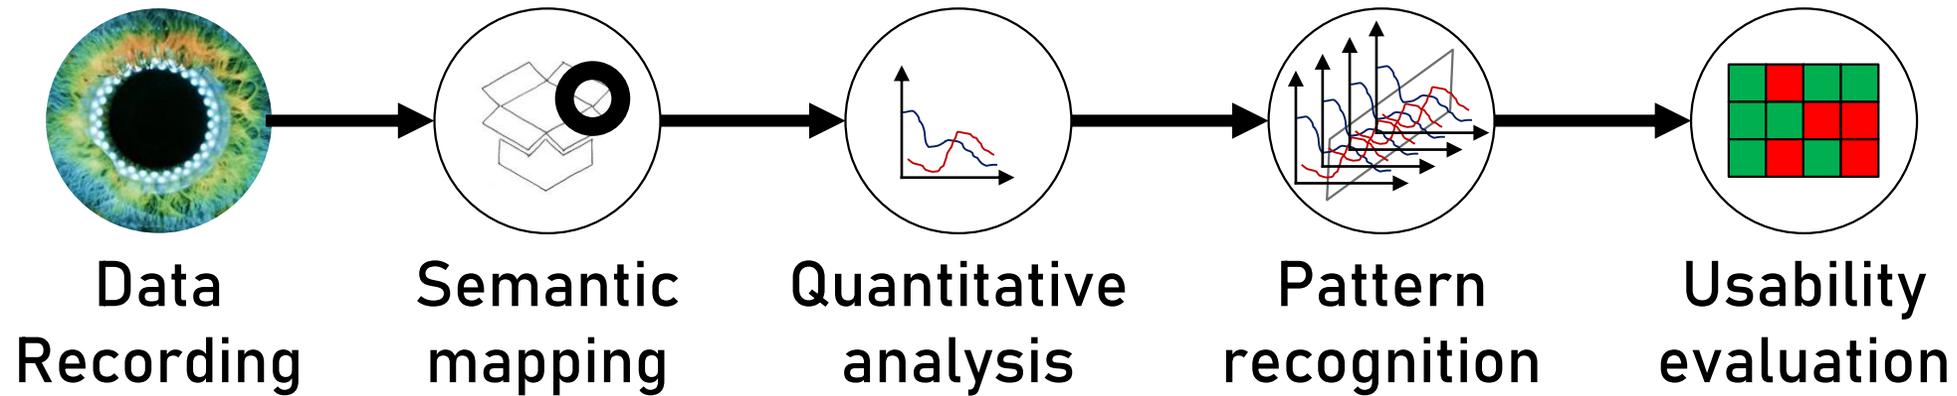

Eye Tracking Analysis – Short Introduction.

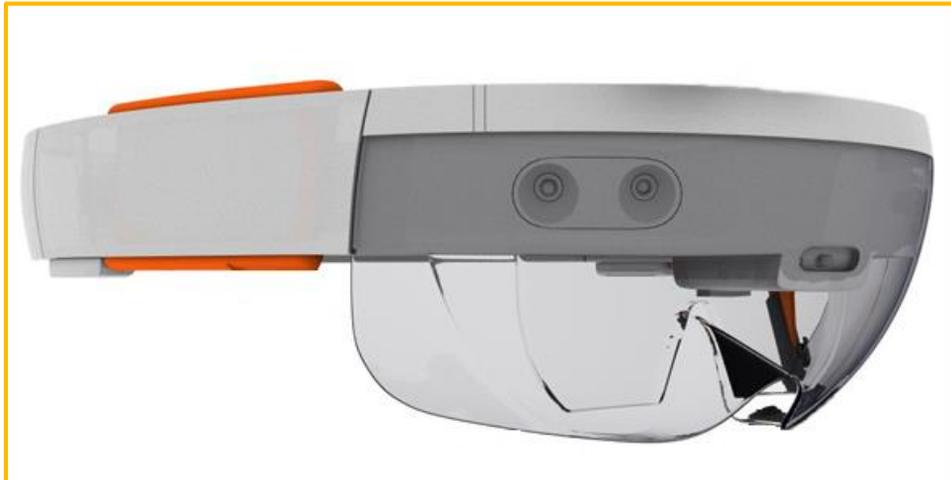

Fixation: The eye is relatively still and extracts visual information.

Saccade Fast movement of the eye between two fixations, without extracting information.

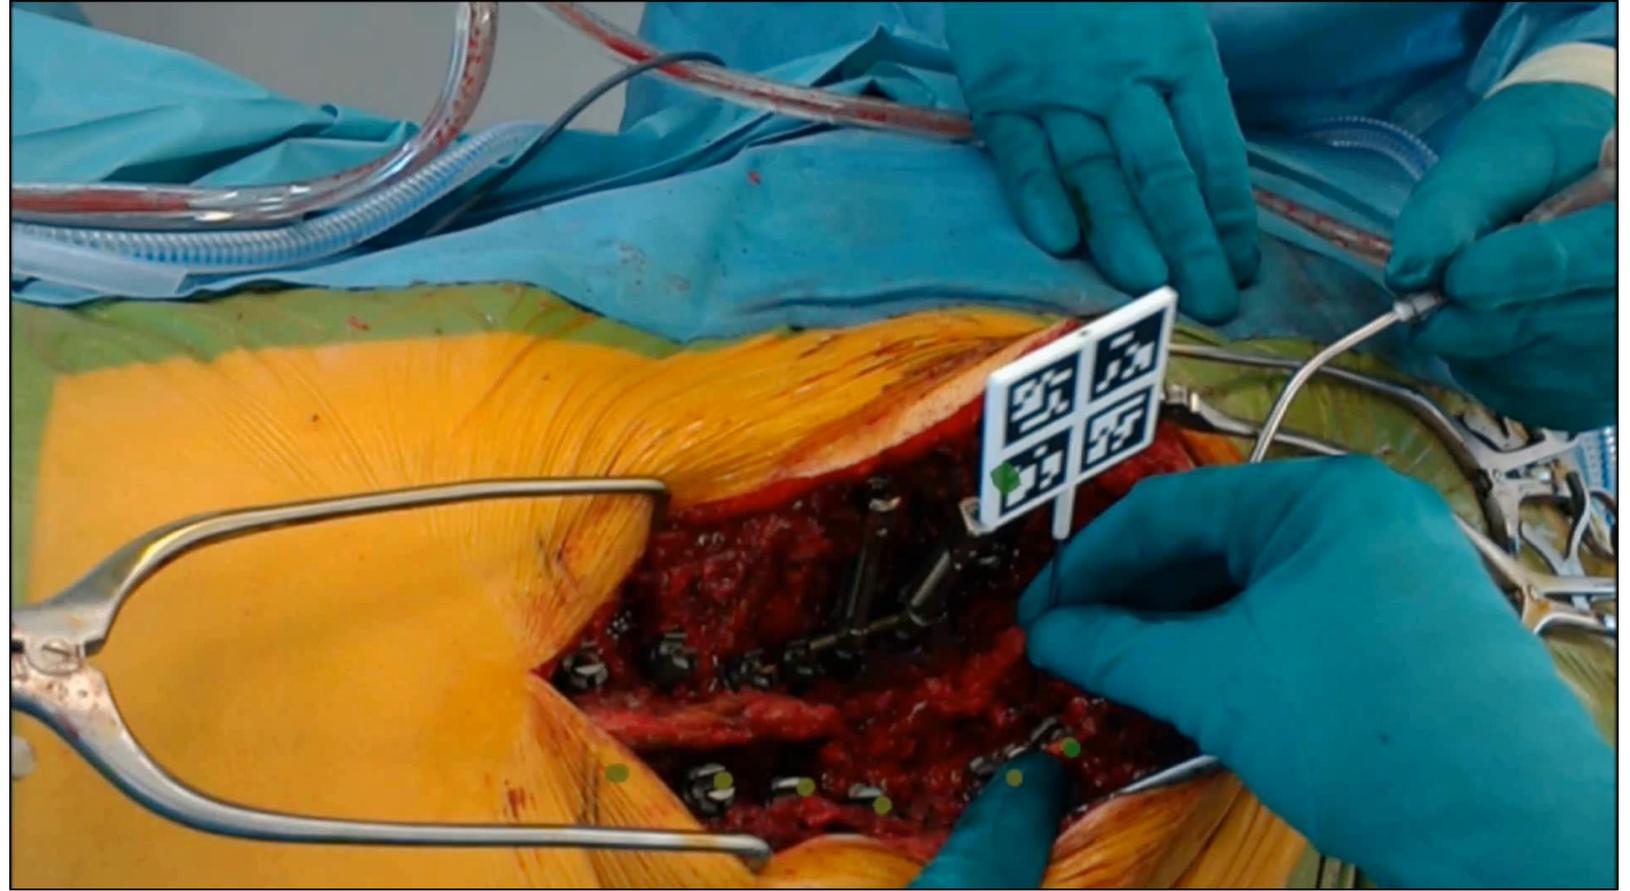

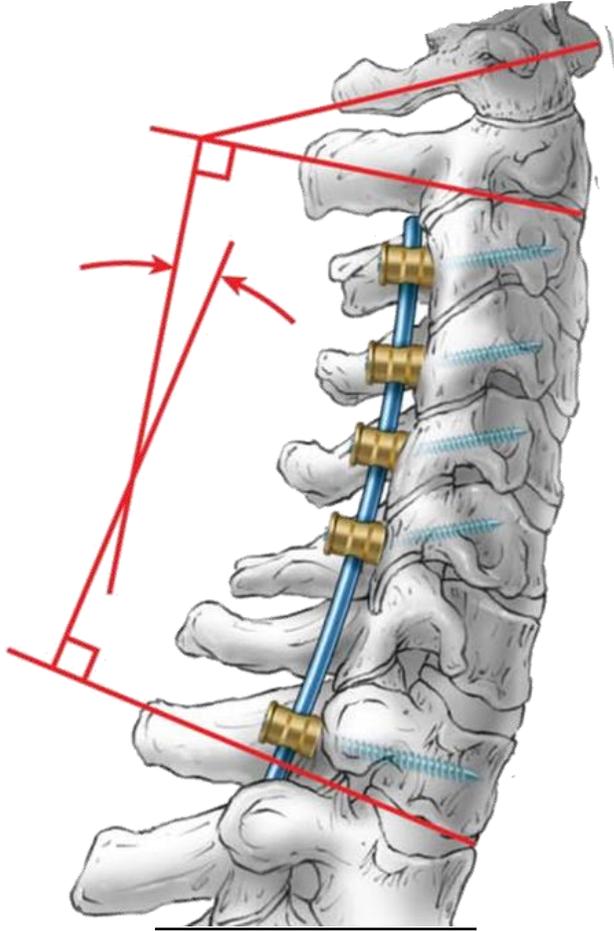

Workflow of Usability Testing with Eye Tracking

HMZ Flagship Project “SURGENT”

Rod Bending in Spinal Fusion Surgery

Balgrist CARD-Team, Prof. Mazda Farshad

What is the Essence of Good Support in Surgery?

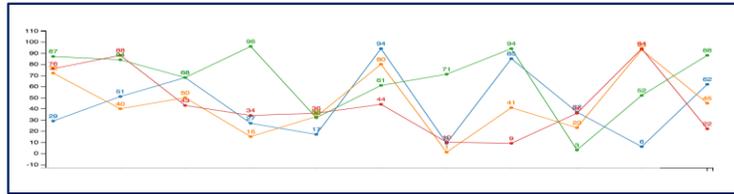

Observing the operator, understanding his actions and anticipating his next move.

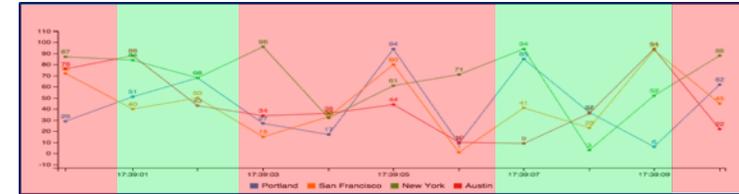

How Can We Successfully Integrate Support Technology?

1. Data Recording

2. Evaluate Data

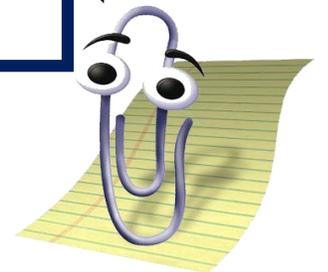

Real-time support during the procedure

- Situation-specific
- Skill-dependent

Predict errors before they happen

3. Closed Loop

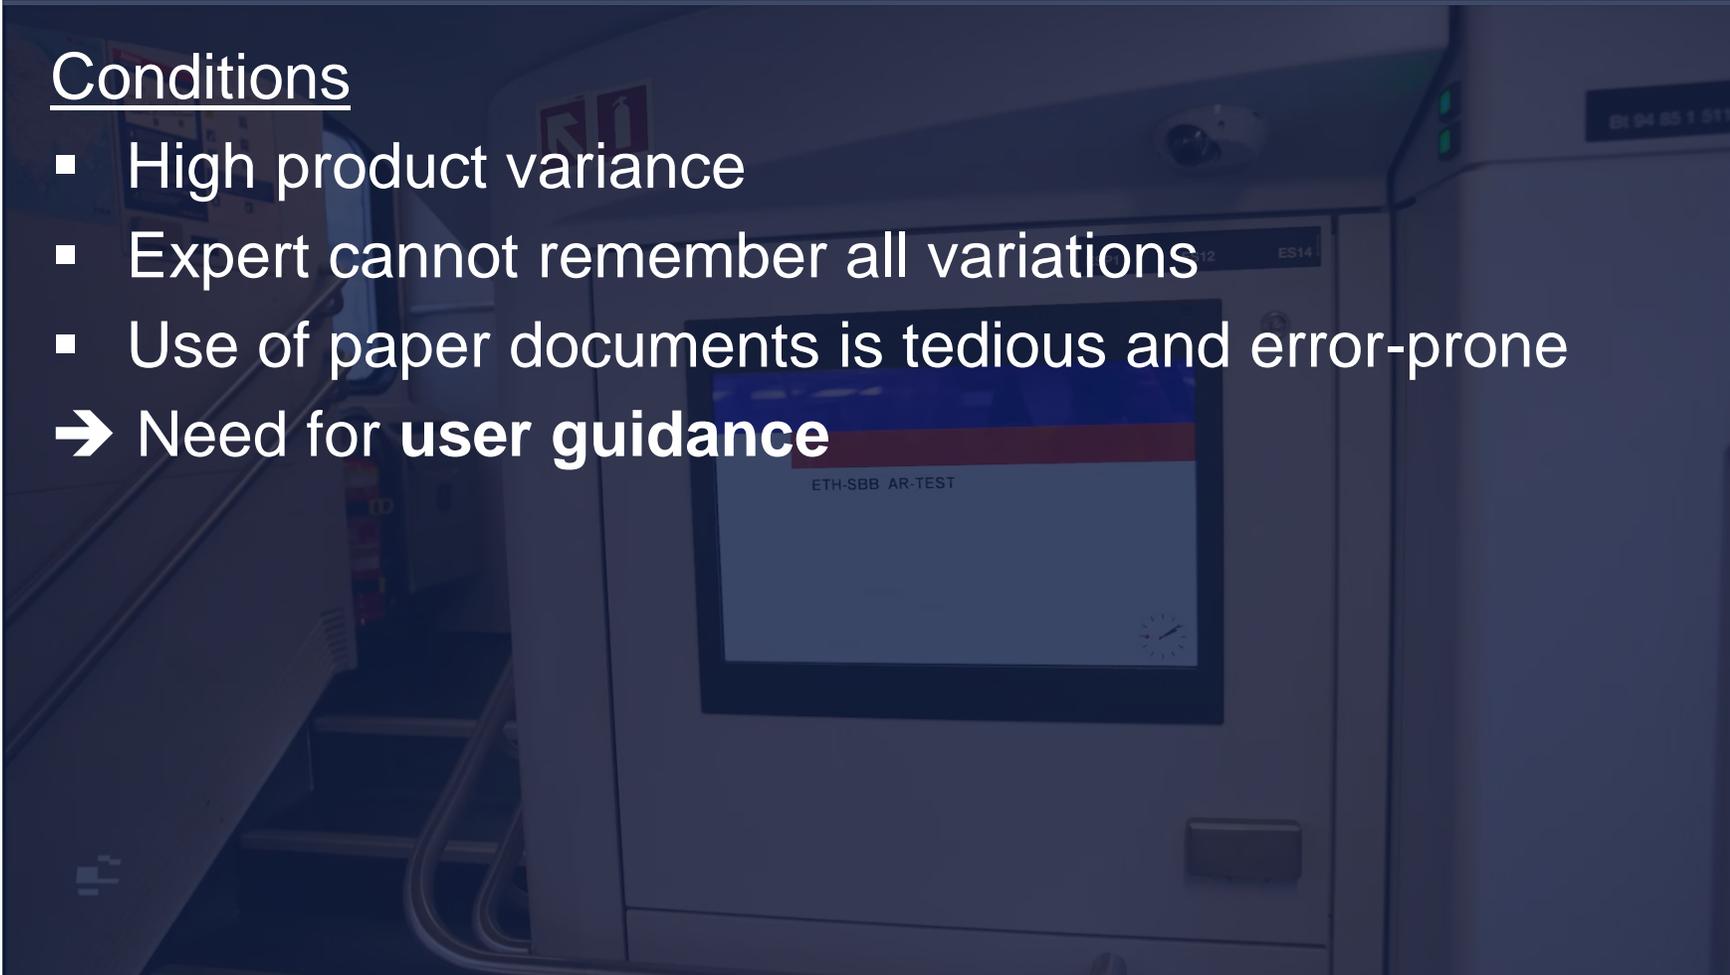

Hi there,
how can I help you?

Maintenance of Emergency Brake System

Conditions

- High product variance
 - Expert cannot remember all variations
 - Use of paper documents is tedious and error-prone
- Need for **user guidance**

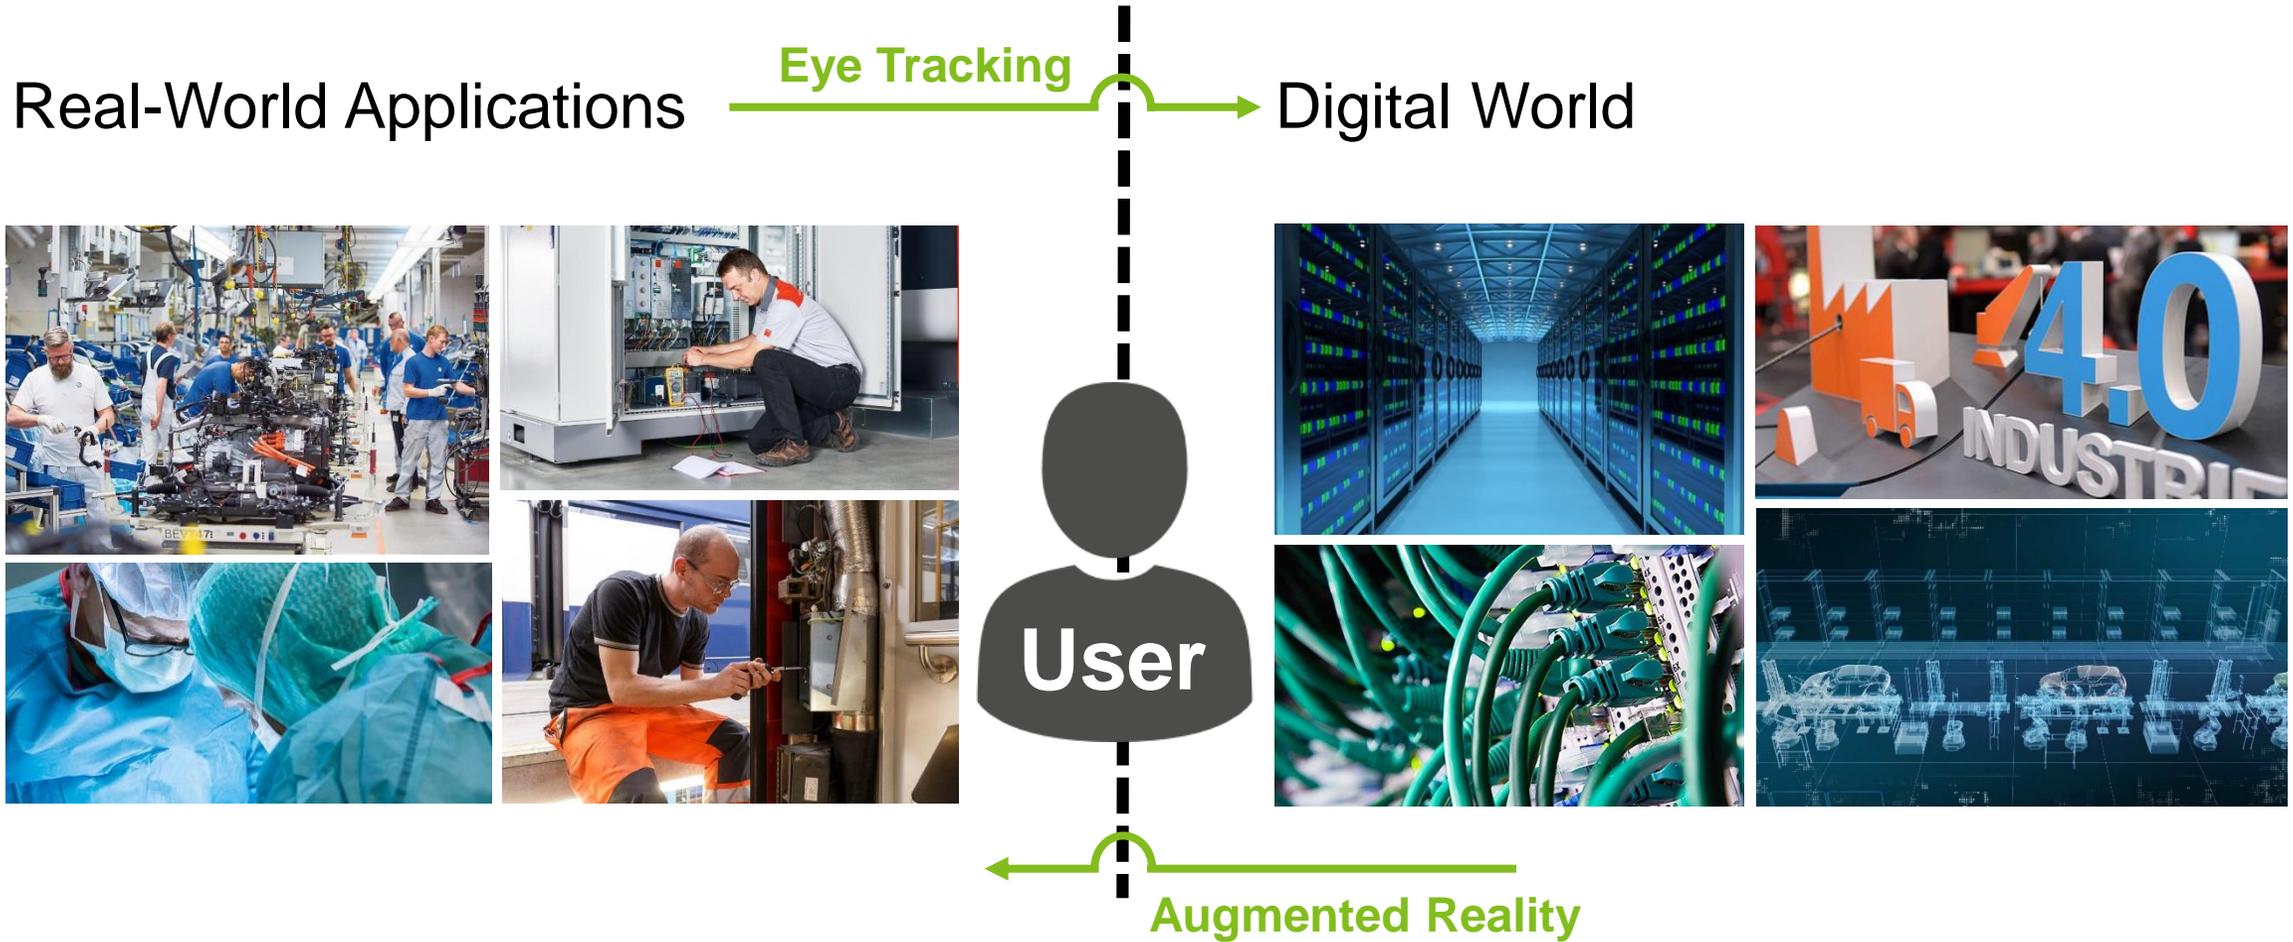

AR Prototype: Maintenance of Emergency Brake System

Results

- Drastic reduction of errors
 - Increase of efficiency
 - Novices using HoloLenses outperform experts working with paper documents
- Identifying **the right applications** is crucial

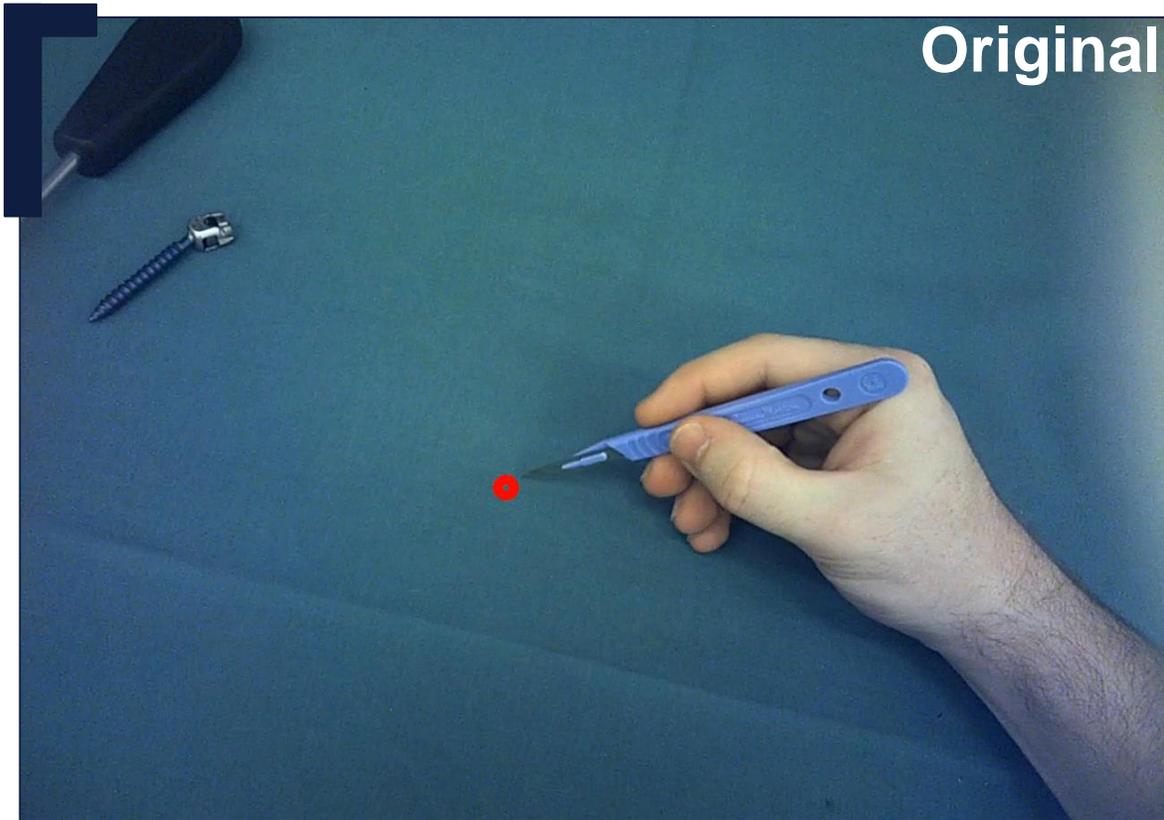

Mixed reality: Merging the real and the digital world

Automated Semantic Mapping - cGOM.

J. Wolf, S. Hess, D. Bachmann, Q. Lohmeyer, **M. Meboldt**,

Automating areas of interest analysis in mobile eye tracking experiments based on machine learning, Journal of Eye Movement Research (2018)

Pattern recognition for usability assessment

Pattern 1

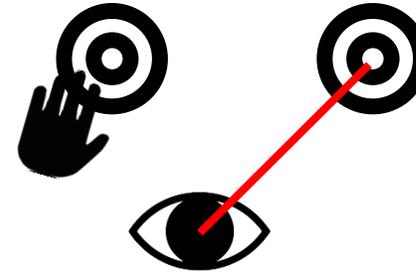

Action requires
strict monitoring

*hand and gaze
on the same target*

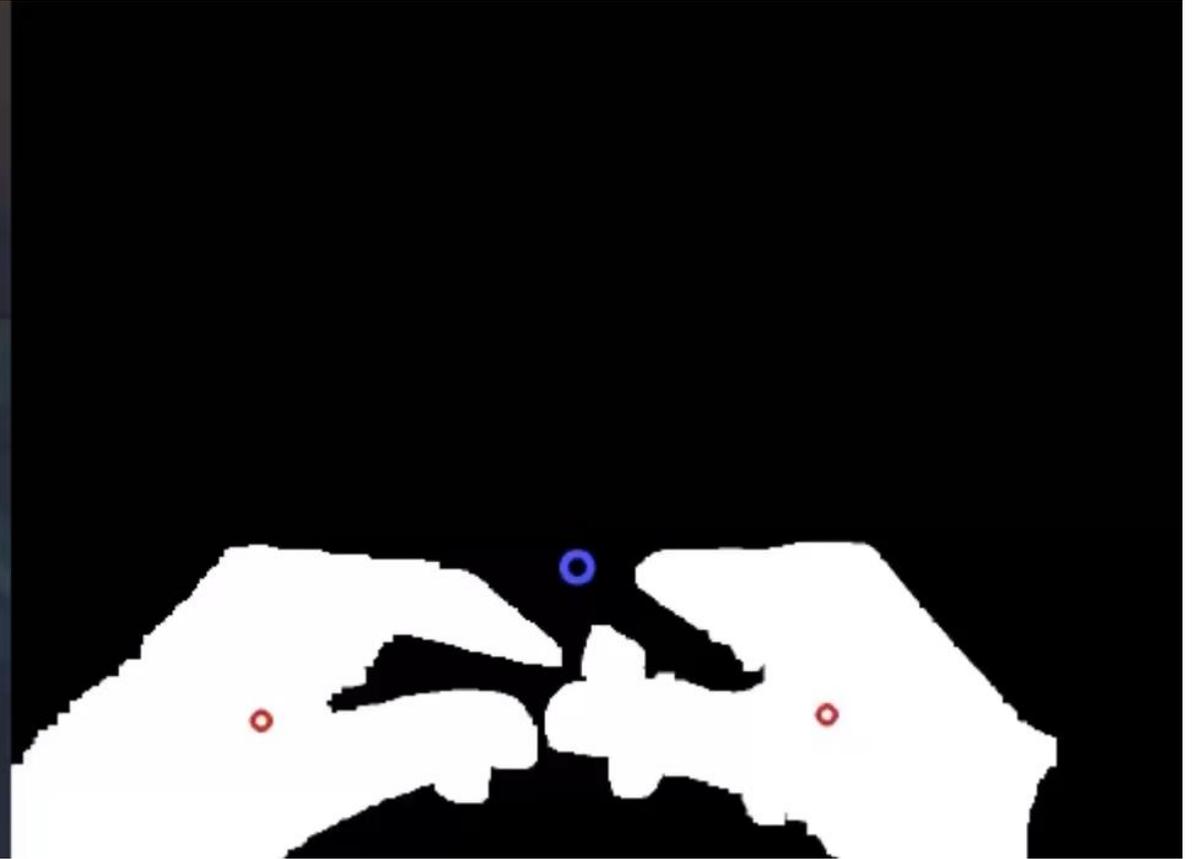

Pattern 2

No monitoring
is required

*attentional system looks
ahead on a different target*

Algorithms to Give the Data Meaning: Hand-Gaze Distance

Long phases of constant hand-gaze distance
indicate problems or time-consuming / demanding tasks

 Gaze point

Depth Camera

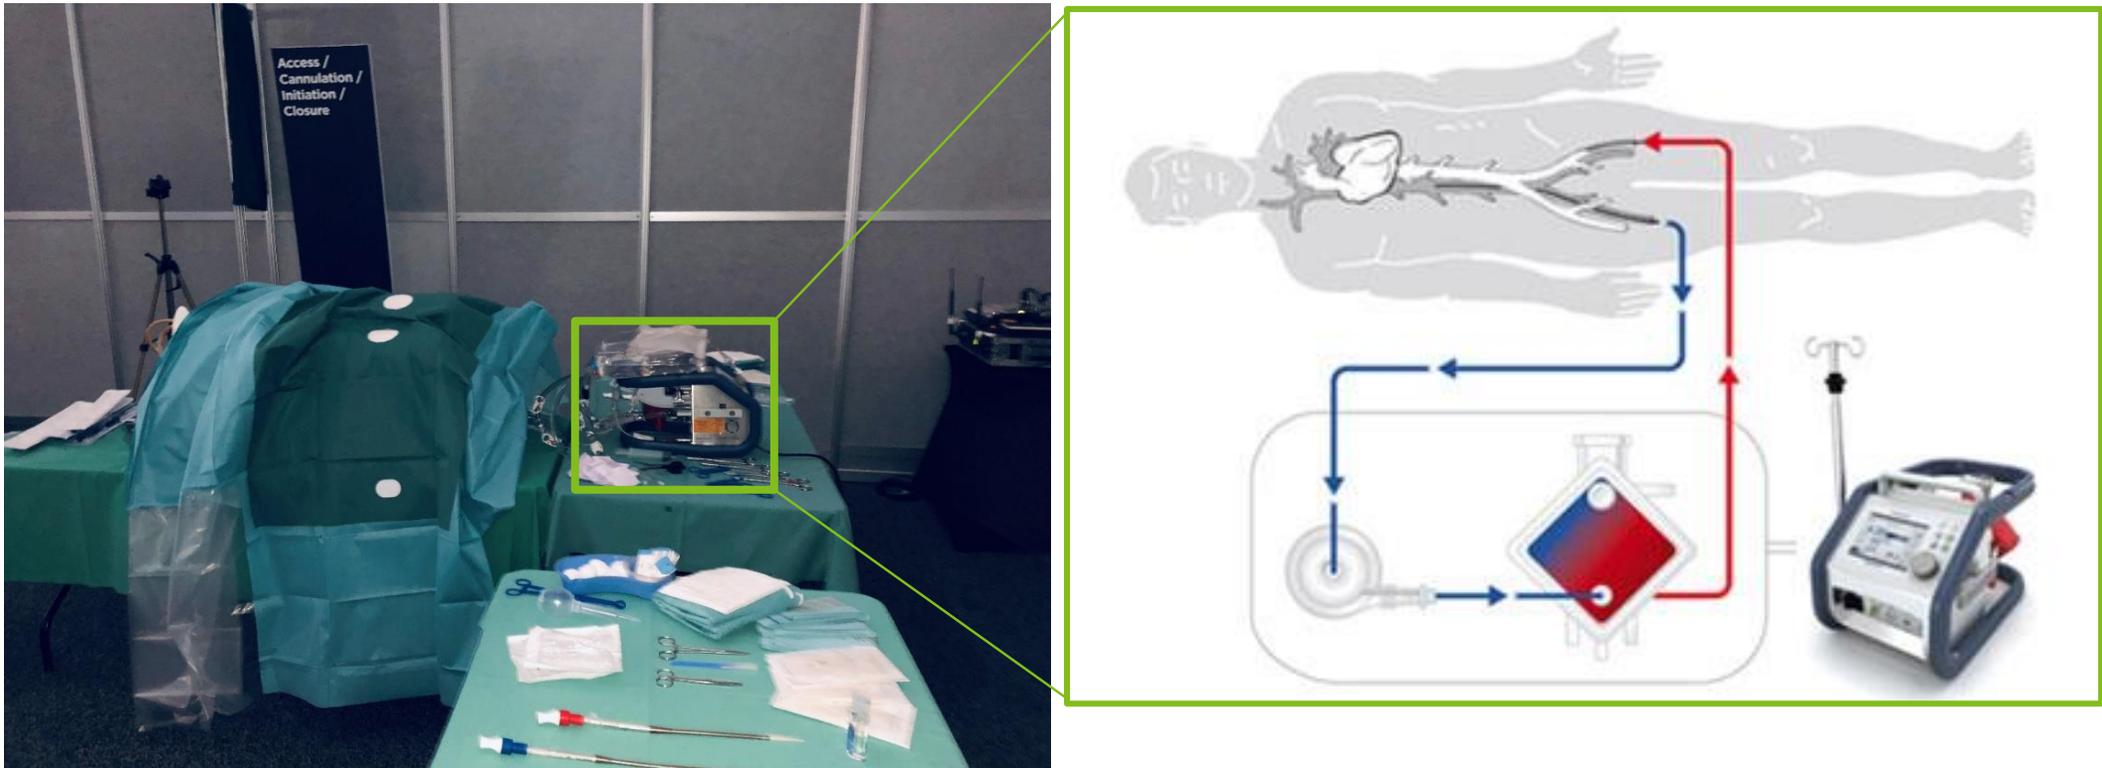

Eye Tracking

Hand Tracking

Full of sensors that can **measure human behavior** to **display appropriate information**

ECMO - Extracorporeal membrane oxygenation

ECMO can greatly **increase survival rate** but is **challenging** to use properly due to the **complexity of the human body**.

Development of ECMO AR user guidance with HoloLens

Team ARORA

Goal: Simplifying the use of ECMO,
increasing patient safety

- Implement **user manual** and **decision tree** for trouble shooting
- Constantly **read patient parameters**
- Implement **context-aware user guidance**
