Creation platform

	SharePoint agent builder	Copilot Studio agent builder	Copilot Studio	Teams toolkit in Visual Studio Code
What users can build	**Knowledge-only agents** These agents reason over Microsoft 365 collaboration data, and they're gated to the SharePoint environment where they're created.	**Knowledge-only agents** These agents feature graph connectors from a pre-approved catalog to expose additional data.	**Task and custom agents** These agents connect to more systems through connectors and orchestration logic to handle more complex scenarios. We may publish agents at this level of complexity and utility to our agent catalog for wide organizational use.	**Retrieval, task, and custom agents** These agents may or may not connect to more systems through connectors and orchestration logic to handle more complex scenarios. We may publish agents produced at this level of complexity and utility as Teams apps or to our agent catalog for wide organizational use.
Technical proficiency	No-code	No-code	Low-code or pro-code	Pro-code
